

AMERICAN  
PRECISION  
MUSEUM

## Mission

We engage audiences in the stories of human ingenuity through the lens of manufacturing — learning from yesterday, exploring today, and imagining tomorrow.

## Vision

All will feel inspired, capable, and welcomed to participate as problem solvers and innovators to help make a positive difference in the world.

**Interviews with diverse stakeholders described a vision for APM focused on four strategic goals:**

APM becomes a sought-after destination that is relevant and meaningful to all audiences, from machine tool enthusiasts and historians, to local, regional, and national youth and adults who are new to our story.

The future museum showcases its unique building, history, and collection through highly interactive experiences, engaging more people in the stories of innovators past and present, the joy of making, and the wonder of understanding how things are made.

APM's STEM+M education and career awareness initiatives are woven into the regional STEM education ecosystem and enhance national efforts through unique partnerships and digital learning resources.

APM actively participates in the regional and national manufacturing workforce development ecosystem that is reshaping the narrative of manufacturing and filling vital workforce needs across communities.
